

Workshops

Our school has technical workshops run by specialist technicians. Students carry out their art work there, in connection with the teaching team.

The wood, metal and volume workshops make up the “construction area”, devoted to sculpture and a variety of three- dimensional creations (classic modelling in various materials).

The engraving, lithograph, offset, and screen printing workshops make up the "printing area".

The photography, soundlab (electroacoustic studio), video and computing workshops combine new media with analogue (traditional) or digital (computer assisted) technology in the "image area".
